Remote Control FBR-2

FBR-2

FBR-2

E-8

Lago SD

Merlin

Product information "FBR2 Remote Control"
FBR 2 is an analogue remote control with an integrated room temperature sensor. It is connected directly to the FBR input terminals of the heating controller Elfatherm E8, Merlin or Lago. With its timeless and decent design, the FBR 2 adapts well to any interior. With the remote control, the various heating programs, such as night mode with reduced temperature, day mode with comfort temperature, automatic mode according to time program or summer / hot water mode, as well as setting the desired room temperature, can be shifted from the heating controller to the living room.

Scope of delivery: FBR 2 including wall-mounted adaptor. The remote control comes with a three-pin **Rast-5 connector with screw terminals for connection to the heating controller Elfatherm E8 or Lago E8.**

Notes on the connecting cable
The ohmic resistance of the connecting cable has a direct influence on the room temperature setpoint adjustment and the measured room temperature.
Example: A connecting cable with a cable cross-section of 0.25 mm2 (e.g. telephone cable) and a length of 10 m causes an increase in the room temperature setpoint of 0.02°C and a decrease in the measured room temperature by 0.01°C.
